**WIRELESS SETUP**

There are 2 ways to setup your wireless connection. You can use the Wireless Connection Setup wizard or you can manually configure the connection.

**WIRELESS CONNECTION SETUP WIZARD**

The following Web-based wizard is designed to assist you for your wireless network setup and wireless device connection.

Wireless Connection Setup Wizard

Note: Before launching the wizard, please make sure you have followed all steps outlined in the Quick Installation Guide included in the package.

**ADD WIRELESS DEVICE WITH WPS(WI-FI PROTECTED SETUP) WIZARD**

According to the Wi-Fi 802.11n specification, Wi-Fi Protected Setup is not fully supported with WEP security mode. We will disable the Wi-Fi Protected Setup if you chose WEP security mode.

Add Wireless Device with WPS

**MANUAL WIRELESS CONNECTION OPTIONS**

If you would like to configure the Internet settings of your new D-Link Router manually, then click on the button below.

Manual Wireless Connection Setup

- In SSID textbox type the name of wireless then scroll down to Wireless Security Mode

**WIRELESS**

Use this section to configure the wireless settings for your D-Link router. Please note that changes made on this section will also need to be duplicated to your wireless clients and PC.

**WIRELESS NETWORK SETTINGS**

Enable Wireless :  Always

Wireless Network Name (SSID) :  ←

Wireless Channel :

802.11 Mode :

Channel Width :

Transmission Rate :  (Mbit/s)

Visibility Status :  Visible  Invisible ←

AP Isolation :

- Select WPA-Personal as Wireless Security Mode and WPA Only or WPA2 Only as WPA mode
- In Pre-Shared Key type Wi-Fi password then click Apply Settings (safest passwords are long and contain at least 8 digits of mixed letters, and numbers)

**WIRELESS SECURITY MODE**

To protect your privacy you can configure wireless security features. This device supports three wireless security modes including: WEP, WPA-Personal, and WPA-Enterprise. WEP is the original wireless encryption standard. WPA provides a higher level of security. WPA-Personal does not require an authentication server. The WPA-Enterprise option requires an external RADIUS server.

Security Mode :  ←

**WPA**

Use **WPA or WPA2** mode to achieve a balance of strong security and best compatibility. This mode uses WPA for legacy clients while maintaining higher security with stations that are WPA2 capable. Also the strongest cipher that the client supports will be used. For best security, use **WPA2 Only** mode. This mode uses AES(CCMP) cipher and legacy stations are not allowed access with WPA security. For maximum compatibility, use **WPA Only**. This mode uses TKIP cipher. Some gaming and legacy devices work only in this mode.

WPA Mode :  (TKIP) ←

Group Key Update Interval :  (seconds)

**PRE-SHARED KEY**

Pre-Shared Key :  ←

Please take note of your SSID and security Key as you will need to duplicate the same settings to our wireless devices and PC.
